# Radioactive Spark Plugs! Submitted by Bob King

I was watching a science program about the periodic table of elements. It featured a highly radioactive element named polonium. It was discovered by Marie and Pierre Curie early in the 20th century. It has few uses. One exception is that it can be used as a trigger to detonate an atomic bomb! And then, some genius decided, you can coat a spark plug with it to improve combustion, horsepower and acceleration!

Since the 1/2 life of polonium is only 4 months, by the time you installed the plugs, the output was already 1/2 (lucky for your mechanic!). The level of radiation was actually low and alpha particles will not penetrate skin, but if you ingest it... You're *DOOMED!*

Get yours on Ebay of course (but they were only made for 40's & 50's cars.). Enjoy! Bob King

## Additional Notes:

The Radiation and Radioactivity Museum (there actually is such a place – Ed.) indicates that official advertising for the polonium spark plugs ran from 1940 to 1953. The only “media” support they received came through the “November 1941” issue of Science Digest, reporting that the vehicle needed “30 percent fewer revolutions” to start the engine.

In practice, the most likely explanation is that any perceived benefit was tied to the simple act of replacing the spark plugs themselves (clean and new, without deposit buildup). As if that weren't enough, polonium's effects were doomed from the start: With a half-life of 138.3 days for isotope 210 (the most abundant out of a total of 42), polonium turns into lead-206.

## LVCC Meeting Minutes by Greg Dittrich

Our latest meeting was held on Saturday May 16 at the America on Wheels Museum. It was called to order at 10:24 AM. We had 11 members in attendance. Prior to the meeting, our group enjoyed conversations outside and viewing each other's cars.

There were no minutes from the April meeting as we were conducting our swap meet instead that month.

The Treasurers Report – April 's ending balance was \$2,304.38 and, after a motion by Scott Oberholzer and seconded by Bob Marlow, the report was approved.

Membership stands at 57.

### Old Business

LVCC's All-Corvair Swap Meet was held on Saturday April 18, 2026. A number of members attended. As always, a fun, successful event! There was a net loss of \$-67.06 for conducting the event. The goal for this event is to provide a fellowship opportunity for the Corvair community and isn't intended as a fundraiser. Excess food was donated to the Help-

ing Harvest food pantry in Reading, PA.

### New Business

President Al Lacki shared that he filed our Corporate Annual Report to the Pennsylvania Secretary of State's office as required.

### LVCC Activities

LVCC's 50<sup>th</sup> anniversary was discussed. It was proposed that we have a gathering/show at the AOW museum. Scott Oberholzer suggested we consider inviting a food truck(s). The site would provide an indoor backup should we have bad weather. Al Lacki said he will reach out to Monica Ziobro, Manager of the museum to discuss if this would be possible.

Edwin, Ryan and Wes are creating a design for T-shirts and perhaps pins to commemorate our anniversary.

It was suggested that we reach out to the Wheels of Time Street Rod Association of Lehigh County as they have a car "Teeter Toter" that challenges drivers to balance their cars in the least amount of time. It would provide an interesting and fun activity.

We are also planning to display our Corvairs at the Das Awkscht Fescht car show being held on Sunday, August 2<sup>nd</sup>. We always have strong attendance and this would provide a perfect alternative for the club's 50th anniversary celebration.

NECC News - President Al shared that the next track day will be on Monday, June 22<sup>nd</sup> at Summit Point Motorsports Park – a facility that has several circuits. NECC is renting the Shenandoah Circuit which features 22 turns and a banked turn that replicates the famous "Karussell" at Nurburgring, Germany. Registration is open. There are a number of Stingers expected to attend a planned reunion. The date will allow attendees to still attend the CORSA Convention.

The annual convention of the Corvair Society of America will be held on June 22-26<sup>th</sup> in Gettysburg, PA.

Next meeting: Saturday June 20th.

### Other Discussion

Scott Oberholzer mentioned that he was watching American pickers and the show featured a gentleman who had built a variety of cut-a-way engines. Among his collection was a Corvair engine!

Pete Pesaresi shared that while preparing his car for the convention, he discovered that his brake shoes were cracked. He's replacing them and questioned if he should have the

drums honed. After some discussion, the consensus was to buy new drums as they cost between \$40-\$60.

### Adjournment

On a motion by Edwin Buitter and seconded by Bill "Senior" Dittrich, the meeting was adjourned at 11.37 AM.

Respectfully submitted by Greg Dittrich.

## Noises from the Rear

### by Mike Dawson

*Source: May 2026 issue of "The Flat Six", the official newsletter of the Prairie Capital Corvair Association.*

This month, we'll attempt to help diagnose noises from the rear of the car. Drive train noises also apply to FC vehicles.

- A rolling noise that does not change in pitch from acceleration to deceleration in the same speed range is usually a wheel bearing. Wheel bearings on early models usually squeak or make a cycling growl. Late bearings will squeak, make a raspy noise or howl.
- A clank when starting from a stop or going into gear may be a U-joint. They can also make a clinking noise, usually at low speed. Loose axle yokes on early models and FC can make the same noise.

- Howling that changes noticeably between acceleration and deceleration is either a worn-out pinion gear, mismatched ring and pinion gear or very loose or worn-out pinion bearings.
- Thunking noises on late models can be either the top or bottom shock mount. Check for shifted lower bushings or rusted top mounting pads. The latter can be repaired.

- Squeaking from one side of a late model going over bumps can be a trailing arm bushing that has popped out of its shell. The arm is rubbing on the bracket and the tire is way out of toe alignment.
- A heavy thump or clunk going over a quick rise may be a separated motor mount on a 1965 model. The other models make less noticeable noises unless almost terminal. Best to check them every time you change oil filters if they are original.
- A loud squawk that occurs briefly as you push in or release the clutch is a pilot bushing problem. Always replace it any time the transaxle is separated as they take a set very quickly.
- A knocking noise at idle which disappears or gets quieter when depressing the clutch is a flywheel with loose rivets (all years, all models of manual transmissions).

*Stick-shift Corvairs have an unusual 2-piece flywheel that was hot-riveted from the factory.*

- A squeal or light rattling noise that is only noticed when holding down on the clutch pedal is a clutch release bearing.
- A moaning sound that is heard only when the engine is cold is probably a late model blower bearing that needs greasing or replacing. Early model bearings usually start a continuous metallic rumbling noise due to their design.
- A light to heavy tapping noise that goes away after driving is usually a lifter that has lost its oil temporarily. Long storage or cold startups and quick shutdowns cause lifters to go "flat". Frequent oil changes and avoiding a lot of start-ups without driving helps this problem. Age and sometimes dirt interfere with lifter check valve action.
- A lighter tapping noise that sounds like a lifter may be a bad exhaust valve guide. The exhaust gas blowing down the guide sounds almost metallic.
- A persistent squeak (usually Powerglide cars) that only occurs at a stop, in gear with your foot on the brake may be the rear parking brake cable at its support brackets or on the backing plate on the inside of the brake drum. To test this theory, pull slightly on the parking brake handle when the squeak occurs. If it stops, you have found the problem. The idling engine gently tugs on the spring attached to the cable assembly: install the missing clips on the two support brackets, grease them and use brake lube under the cable inside the brake drum.
- A chirping from the engine that is noticeable only on acceleration may be a loose cylinder head. Retorque the heads immediately or you will have blown head gaskets. This is usually caused by overheating and can sometimes result in studs pulled out of the crankcase. You can also get a bad smell in the heater since combustion gas is escaping.
- An actual blown (burned through) head gasket will make a persistent spit-spit-spit noise as the engine idles. The noise will get louder under a load and bad fumes get in the heater.
- A mild howling from four speed transmissions up through 1965 that is only heard in first, second and third is probably the needle bearings and shaft in the counter gear. The noise is gone in fourth gear since the counter gear is not loaded. A common problem and replacement parts are available.
- A clicking noise from the rear of early models & FC at very slow speed may be the brake shoes snapping across backing plate pads as they try to follow an out of round drum or a slightly bent axle (common problem). Apply brake lube to the pads or correct the problem. This can also be a bad U-joint or a badly worn stub axle that is rocking the side gear of the differential.

## Das Awkscht Fescht Corvair Row! Sunday August 2, 2026 is Club Day

Club Day at the Fescht is a favorite for Corvair lovers across the region because we have a full row reserved on the show field just for us, courtesy of LVCC member extraordinaire Randy Kohler!

We typically draw 40 Corvairs of all years and models. It's a great way to get together with folks from all the regional Corvair clubs.

Show Car Registration Fee: Registration through December 31, 2025: \$17.00 per day per vehicle. Registration January 1 through July 1, 2026: \$20.00 per vehicle. Spectator Admission: \$10 per adult, FREE for age 15 and under.

Online registration is available, but the registrar adds \$3.18 to the fee. Avoid the fee by registering by US Postal. To do it, download the registration form at <https://awkscht.com/>

Or if you don't mind sacrificing a copy of this newsletter, print it and cut out the form shown below. We are Club #6.
